

COLOZONE™

What are OTB Products?

COLOZONE is the most effective oral oxygenator found in the world today. Originating in Germany from the *Institut fur Sauerstoff Heilvafahren* (Institute for Oxygen Therapy), it has been commercially available since 1898. Its efficacy and usefulness has long been proven. There are many imitators, but none is even remotely as bio-efficient as the original OTB products.

What Does COLOZONE Do?

Your health and the quality of your life depend on the available oxygen present in every breath you take. COLOZONE (as should all oxidation/oxygenation products) does what two-time Nobel Prize Laureate Dr. Otto Warburg suggested for health maintenance, cancer and degenerative disease prevention. That is, plainly, to increase the oxygen to the body cells, literally “flooding the body with oxygen”. This, in turn, assists the oxidation/reduction (redox) mechanism of the cell, making for greater efficiency and detoxification.

Is COLOZONE Safe for Children, Pregnant Women, the Elderly and Animals?

Absolutely. Adjusting the dosage accordingly, the benefits of COLOZONE are realized by everyone.

What Can I Expect While Using COLOZONE?

The first effect one can expect while taking COLOZONE is enhanced excretory function. Commonly noted also is an increase in overall energy. While the increase in bowel function never completely abates, it does ease as cellular toxicity lessens and one remains on the product for some time. Effects do vary among individuals but enhanced bowel function and an increase in energy are two of the most noted effects.

How Long will the “Loose Stool” Effect Continue?

COLOZONE does NOT cause diarrhea. Increased dose equals increased bowel function AND improved assimilation. Effects do range from a loose stool to clear water, depending on the dose. Remember, this is enhanced oxidation/oxygenation, NOT pathological diarrhea with its attendant lethargy, dehydration and electrolyte depletion. COLOZONE increases assimilation and enhances acidophilus and friendly bacteria production; actually repairing bowel function, oxygenation the body, improving blood quality and assisting in parasite elimination.

What is the Dosage of COLOZONE and How Is It Taken?

The dosage for an adult ranges from one quarter to several teaspoons twice daily, am and pm. The average maintenance dose is a teaspoon in the morning and a teaspoon in the evening. COLOZONE should be mixed into pure distilled or spring water. Follow immediately with 1/4 to 1/2 lemon squeezed into 4 ounces of water. Repeated tests on the products over the past 100 years to determine their safe and efficacious usage has found that up to thirty-two teaspoons can be consumed in one day with no detrimental effects noted. The product is non-toxic, harmless, beneficial, effective and healthful.

Why is COLOZONE so Different from All Other Mineral Based Oxygen Therapy Products?

Dr. Blass and his German mentors from the IOT, Berlin, discovered a method of bonding ozone and larger compounded oxygen groups to mineral compounds. This work, documented by the University of Moscow and several other institutions relate first hand the expertise of the German scientists. The formation of these compounded oxygen groups at room temperature are what makes this product so different, unrivalled, and effective.

The FDA has not evaluated these statements. This product is not intended to diagnose, treat, cure, or prevent any disease.
