

It Works!

It Works! mineral supplement is NOT A DRUG OR MEDICATION, but a nutritional supplement that may assist our bodies to recover from a habitually deficient diet.

It Works! Is a supplement manufactured with a special clay and dissolved in an extract made from several types of cactus, and aloe-vera which make a catalytic substance. This substance regulates metabolic processes and assists in our body's self-recovery.

Proper nutrition should supply fats, carbohydrates, proteins and vitamins, as well as essential minerals and water. Today it is very common to have dietary deficiencies of many nutrients and minerals that the body is not able to produce by itself, as well as insufficient water. For this reason, *It Works!* Was developed to supply minerals often needed in addition to our food intake.

How your body could react:

A malnourished liver may not function properly, allowing a buildup of toxic and noxious substances. *It Works!* Can help many impurities within our bodies start to move naturally. Those who have abused drugs or alcohol, or who have cancer may begin the removal process in a more dramatic way. They may experience symptoms such as dizziness, nausea, vomiting, fever, diarrhea, joint pain, and skin eruptions.

How *It Works!* Works:

It Works! contains natural ingredients. It is non-toxic and easy to digest. *It Works!* mineral supplement works like a catalytic agent (activates or inhibits) in diverse metabolic processes throughout the body. In essence, *It Works!* helps to rebuild the liver. A better functioning liver can now help to produce needed enzymes which work as a catalyst to rebuild other organs in the body; pancreas, lungs, heart thyroid to name a few. *It Works!* also aids the body in breaking down harmful chemicals which need to be eliminated in order for the body to function better. The liver is the chemical factory of your body and when it functions properly, you function properly. The end result is that you are healthier and you just feel better!
